

ABSTRACT

This invention relates to a polycarbonate resin composition comprising: (A) 100 mass parts of a polycarbonate, comprising (a-1) 10 - 100% by mass of a polycarbonate-polyorganosiloxane copolymer and (a-2) 90 - 0% by mass of an aromatic polycarbonate (a-2); and (B) 5 - 100 mass parts of a fatty acid polyester, and improves the flame retardancy of the polycarbonate resin composition without using halogen flame retardants and, further, achieves high fluidity of the resin composition.
